

 Notes

I support Net Neutrality. My past experience with deregulation with electricity in Texas was very negative. Texas went from having the least expensive electricity in the US to the most expensive for many years. Should the FCC abolish Net Neutrality, consumers will be throttled with fees for streaming videos depending on who's videos you watch. Doing away with Net Neutrality will provide a huge advantage to Spectrum, Verizon and other huge companies while smaller companies will see their speed stifled unless they pay the big dogs.
